

Welcome to XO Lights

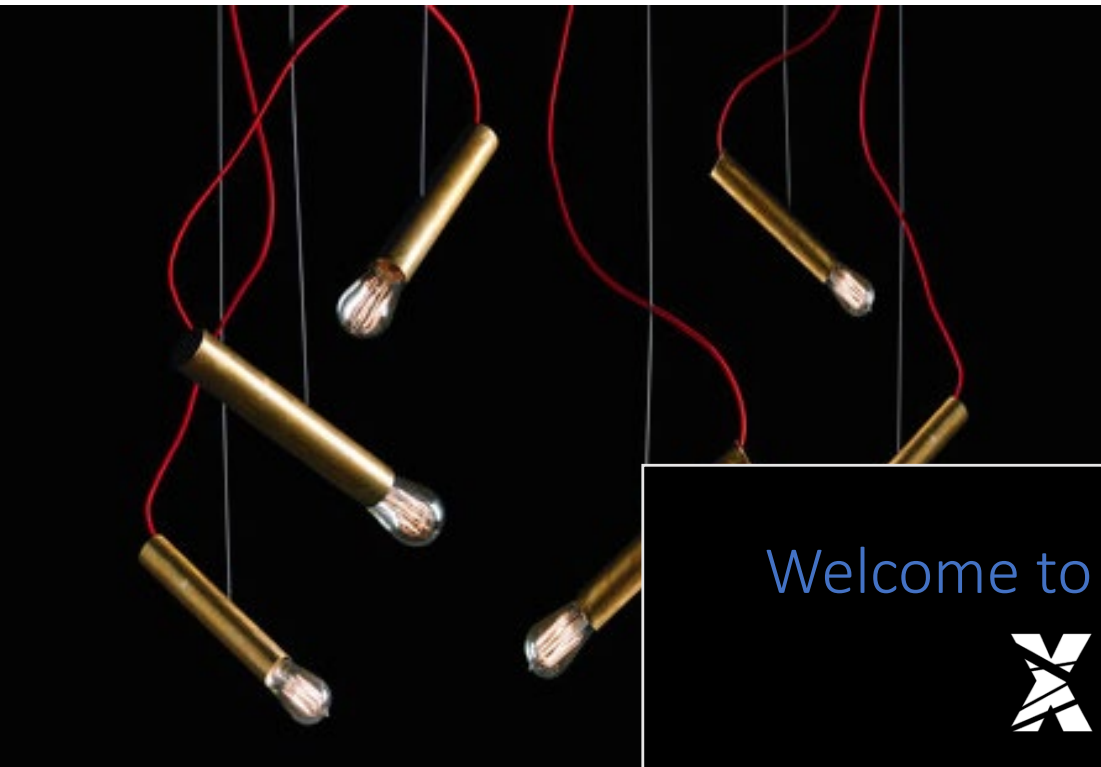

an award winning lighting
company.

Extra ordinary lighting & equipment trading LLC

The difference between ordinary
and extraordinary....
is just that little *Extra*.

Welcome to XO Lights.....

Total light solution provider

Lighting awards

XO Lights is a **total light solution provider** based in Dubai, United Arab Emirates.

XO Lights delivers bespoke and energy efficient architectural lighting solutions within your budget and time. We can deliver a project turn key, starting from lighting design, to light selection, providing you with the budget and bill of quantities, creating the CAD documentation for lighting and supplying the lights on site.

XO Lights offers more than 15 years experience in the Middle East. Passion and preparation are the key factors to the growth of XO Lights.

Light never stops to amaze us. We are fascinated by it. It is a basic human right to have good lighting. Light directly influences our productivity and the way we feel.

Light is a technically difficult yet astonishing medium that requires mastery of varied and continually evolving disciplines. A good lighting design integrates the arts, sciences and business of illumination design and implementation far beyond concerns of visibility and horizontal lux levels.

XO lights promotes Human Centered,
Energy efficient &
State of the art lighting

Human centered

Energy efficient & state of the art lighting

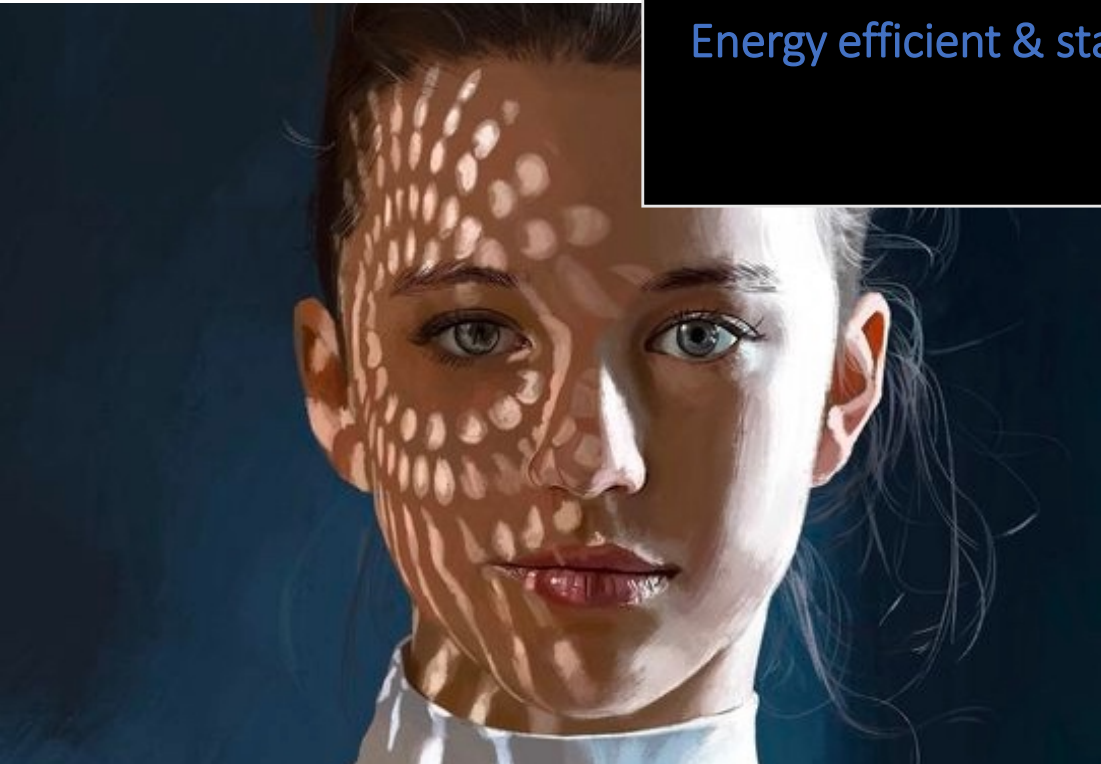

Product Palette

XO Lights can use several different lights to complete a project. The lighting palette can exist of a combination of spotlights, downlights, tracklights, striplights, and decorative lights.

This palette can be complemented with a suitable lighting control system and control settings to create lighting scenes throughout the day and evening.

The goals and demands in the variety of projects are not only challenging but also rewarding when achieved.

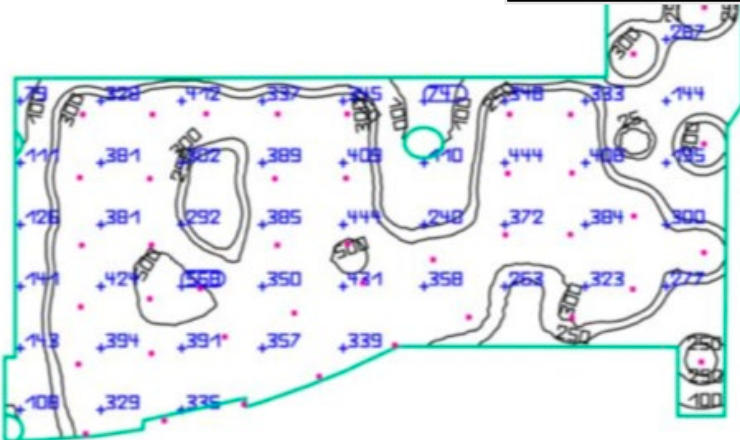

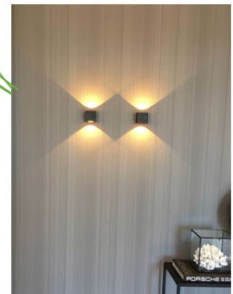

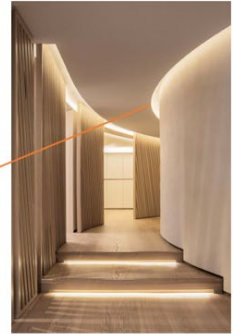

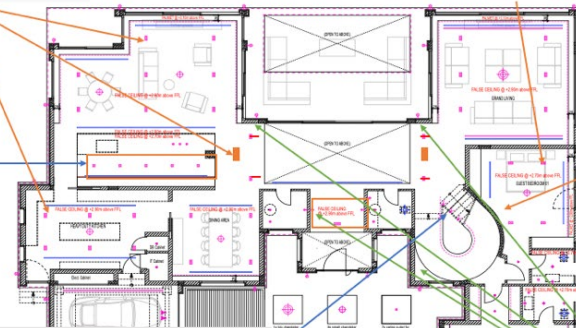

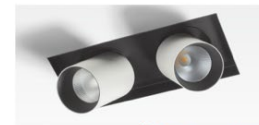

Light planning

After an initial briefing to be informed about the project XO lights will start by making a selection of lights that are most suited for the projects style and requirement. This selection can have a combination of decorative and technical lights. And will be given with a preliminary budget indication. If the budget range is approved the lighting plan will be developed further with light calculations to verify the light performance on site. After fine tuning the light plan with final quantities the final budget for lighting will be given.

The process

Clear documentation and information will lead to making the right decisions.

List of additional lighting engineering services:

- lighting design
- light planning and calculation
- (alternative) product sourcing
- lighting specification assistance
- customizing light solutions
- value engineering
- light calculations (DIALUX)
- comparison studies
- LEED engineering for lighting
- home and building automation and programming

XO light engineering services

People make a successful organization. XO Lights has a team of motivated light professionals to offer a multitude of light related services to find the best result for your projects..

Visualizations with DIALUX

XO Lights uses Dialux light calculation program to evaluate the choices we make for the lights. Dialux will show the near real effects as it would be after installation of the lights.

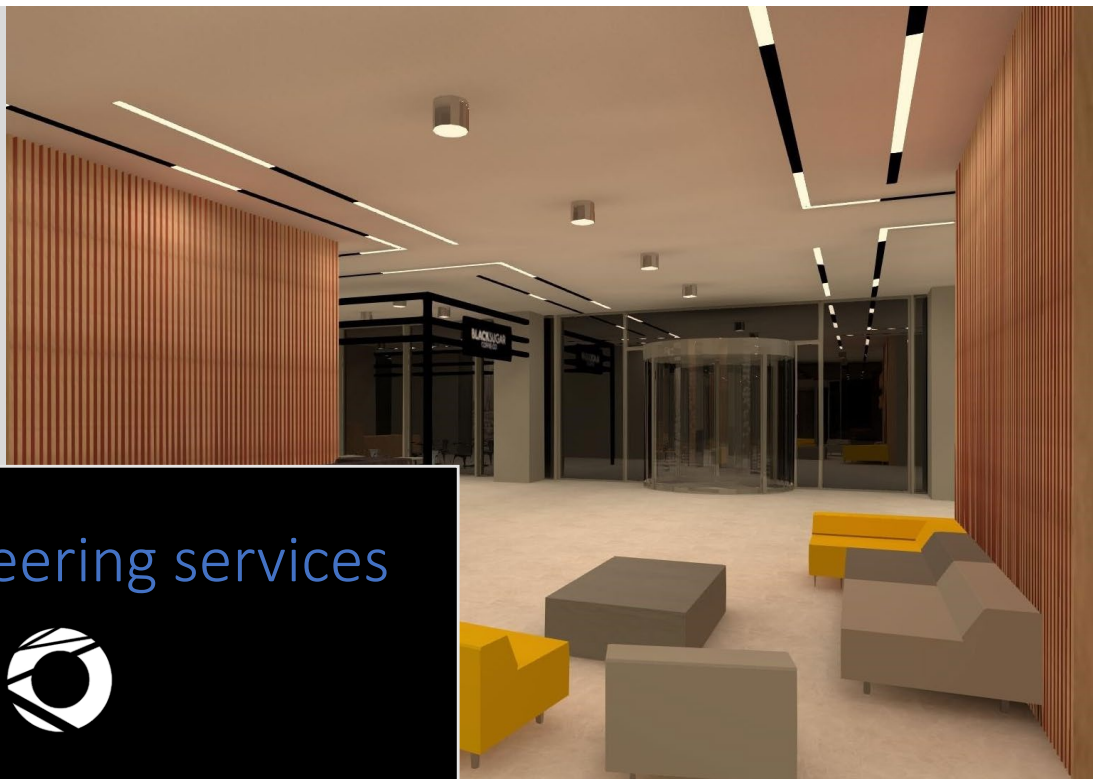

It is also a good and honest rendering tool. XO uses Dialux to make renderings of a project. This results in clear images without additional 'make-up' or cosmetic effects to cheer up the image.

What you see is what you get.

Customized Lighting

XO Lights works together with designers to create fabulous customized lighting sculptures, or decorative lights. We have the inhouse engineering to provide shop drawings and can give you advice on the best materials to use.

Our own installation team will come and make sure it will placed to your satisfaction.

Highlighted project

Masjid sheikh rashid bin mohammad bin rashid al maktoum

XO Lights customized a chandelier that had to light up the domes and also give general light for the prayer area below. The chandelier has a diameter of 10 meter, and is surrounded by floating panels with intricate mashrabiya patterns that are back lit with LED. The chandelier has the shape of a flower and carries decorative gold-plated lanterns and powerful Led downlighters. Besides the chandelier XO Lights also supplied the facade and interior lighting of the mosque and Islamic school.

Highlighted project:
Sharjah flags of the Emirates

The emirate of Sharjah has many roundabouts with centrally placed flagpoles carrying the flag of the United Arab Emirates. The flags are a proud symbol of the country and the flagpole roundabouts act as orientation points throughout the emirate of Sharjah.

From a distance the flag might not look very big but the dimensions tell you otherwise. The fabric is 20 x 10 meter, this fabric sits at the top of a 75m high flagpole. The appearance of the flag differs with the weather conditions. It might be visible in full size when there is a wind blowing, but in quiet weather it will hang down. And in case of changing wind direction, the flag has to be able to catch the light 360 degrees around the pole.

In order to be as efficient as possible we had to carefully design the light solution and calculate the lighting beams and required light output. We also wanted the light to only hit the flag to avoid unnecessary spilled light to the sky. Clever engineering has resulted in good visibility and low energy consumption.
